Re: NEW Green 2.0 Nationwide Hispanic/Latino Voter Climate Survey Results

KEY SURVEY FINDINGS

- **Hispanic/Latino midterm voters are hopeful and motivated to get involved with the progress the U.S. is making on climate change, even as overall midterm voters feel frustrated by the progress being made. A clear majority of voters believe it is important that the groups and organizations working to address climate change are racially and ethnically diverse – shares are stronger among Hispanic/Latino voters.**
- **Outside of the economy, climate change has broken through as a top priority among Hispanic/Latino voters; It is now equally as important to them as immigration, gun violence, and abortion.**
- **Hispanic/Latino voters are overwhelmingly concerned by the perceived worsening impacts of climate change – almost three in four are worried about climate change. Hispanic/Latino voters' sense of urgency to address the issue is even stronger.**
- **Our research finds that climate change alone can decisively influence voters' choice of candidates at the ballot box this November. Hispanic/Latino voters especially are far more likely to support a candidate for Congress who has “addressing climate change” as one of their top three priorities. Messaging only improves support for such candidates.**

FOR HISPANIC/LATINO VOTERS, ADDRESSING CLIMATE CHANGE REQUIRES INCLUSIVENESS; ENVIRONMENTAL ORGANIZATIONS ARE SEEN AS LEADERS ON THE ISSUE

Hispanic/Latino voters currently feel *hopeful* (35%) and are *motivated to get more involved* (32%) when it comes to the progress the U.S. is making on climate change. Though, much like overall likely midterm voters, they are also *frustrated* (35%).

Overwhelming majorities of voters believe the groups and organizations working to address climate change should be racially and ethnically diverse, with 68% of voters saying this is important and 35% saying this is *very important*. **Among Hispanic/Latino voters, racial and ethnic diversity of these groups is even more important (70% important, 41% very important).**

Hispanic/Latino voters trust the opinions of experts when it comes to climate change and actions that can be taken to protect the country from its impacts. *Scientists* (71% trust, 29% distrust) and *climate change and environmental experts* (66% trust, 34% distrust) are seen as some of the most trustworthy, while *CEOs and business leaders* (30% trust, 70% distrust) and *federal politicians* (31% trust, 69% distrust) are at a net some of the least trustworthy.

Among Hispanic/Latino voters, the net amount saying *environmental advocates and organizations are welcoming the inputs of communities of color in their solutions to climate change* is net +19 (53% yes, 34% no), similar to that of the overall electorate (net +24, 52% yes, 28% no).

When it comes to climate change, *environmental advocates and organizations* are trusted by almost two-thirds of Hispanic/Latino voters (62%). **Moreover, *environmental advocates and organizations* are the only group tested in our battery of climate entities that more than three in five Hispanic/Latino voters believe are taking their opinions and concerns on climate change into account (63%).** For comparison, by almost 10% more, Hispanic/Latino voters say this of *environmental advocates and organizations* than the next highest-testing group. The following is detailed below:

- Environmental advocates and organizations (63% yes, 30% no)
- Community leaders and organizers (54% yes, 36% no)
- Local politicians (46% yes, 47% no)
- State politicians (42% yes, 48% no)
- Federal politicians (35% yes, 56% no)

ADDRESSING CLIMATE CHANGE IS A TOP PRIORITY FOR HISPANIC/LATINO VOTERS

A plurality of Hispanic/Latino voters (30%) say inflation is the most important issue America is facing right now, but – outside of inflation and the economy – climate change (8%) breaks through as an important top priority to Hispanic/Latino voters. **Climate change is now seen to be just as important as immigration (8%), gun violence (8%), and abortion/reproductive rights (8%) among Hispanic/Latino voters.**

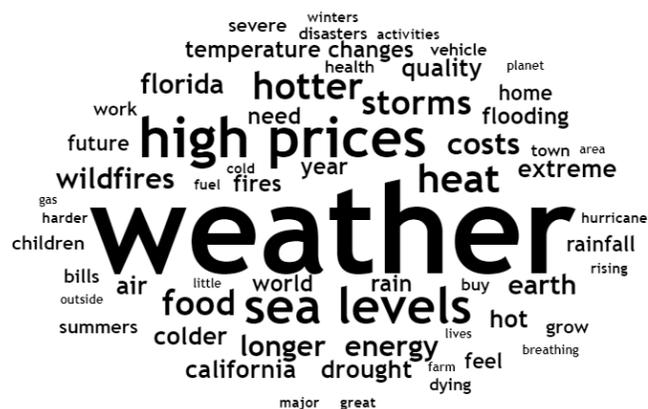

Hispanic/Latino voters are concerned about climate change – even more so than the already highly-concerned electorate overall. While, two in three voters overall are worried about climate change (68% worried, 34% extremely worried), by 6 points Hispanic/Latino voters are more worried (74% worried, 43% extremely worried). **An even larger share of Hispanic/Latino voters say it is important that the U.S. address climate change (81%),** with over two-thirds of Hispanic/Latino voters saying it is *very* important (64%). In fact, the total share of Hispanic/Latino voters who say it is *very* important is 14 points higher than the electorate overall (50% very important).

HISPANIC/LATINO VOTERS ARE FEELING THE IMPACTS OF CLIMATE CHANGE

Three-quarters of voters say climate change has an impact on their life, with nearly a third of voters (30%) saying climate change has a *major* impact. **Hispanic/Latino voters, however, are more likely to say climate change has an impact on their life,** with more than eight in ten Hispanic/Latino voters saying climate change has had an impact (82%) and nearly half saying it has a *major* impact on their life (47%).

An open-ended question asking Hispanic/Latino voters to describe the impacts climate change has on their life shows a multitude of unique impacts, but notably, concerns about “high prices,” “sea levels,” and “heat” break through – as do other extreme weather issues (to a lesser extent).

Hispanic/Latino voters: [If Impact] Describe the impacts climate change has had, or currently has, on your life.

HISPANIC/LATINO VOTERS FIND DEMOCRATS' RECENT CLIMATE ACCOMPLISHMENTS APPEALING

Almost three in four Hispanic/Latino voters (71%) are familiar with Biden’s plan to address climate change, and marginally approve of Biden’s handling of climate change by a net +6 (53% approve, 47% disapprove). Despite Biden’s fair standing on this issue, Hispanic/Latino voters disapprove of his handling on *his role as president* overall at a net -6 (47% approve, 53% disapprove) and marginally so of his handling of *racial justice and equity* at a net -2 (49% approve, 51% disapprove).

In the context of voting in the upcoming election, recent Democratic climate accomplishments are appealing to large portions of likely Hispanic/Latino voters. In particular, highlighting investments in FEMA to combat extreme weather (79% total appealing), investing in infrastructure that moves domestic energy away from oil and gas (73% total

appealing), establishing the White House Environmental Justice Advisory Council to provide more resources to low-income and communities of color (73% total appealing), and plans to cut pollution in half by 2030 (74% total appealing) are among the most appealing accomplishments to Hispanic/Latino voters.

Moreover, after a brief description* of the climate-related benefits of the Inflation Reduction Act, 64% of Hispanic/Latino voters support a candidate who voted in favor of the IRA and nearly two in five (38%) of Hispanic/Latino voters would *strongly* support them.

HISPANIC/LATINO VOTERS SHOW STRONG SUPPORT FOR CLIMATE-FOCUSED CANDIDATES

In our initial vote, **almost seven in ten Hispanic/Latino voters (69%) are more likely to support a candidate for Congress who has “addressing climate change” as one of their top three priorities to address once elected** – with almost half (45%) of Hispanic/Latino voters saying they would be *much more* likely to support such a candidate (net+45, 69% more likely, 24% less likely).

Messaging focused on the impacts of climate change are widely appealing to Hispanic/Latino voters and moves them to further support climate-focused candidates. Specifically, messages focused on health and improved air quality through reduced emissions (48% very convincing) and saving U.S. households on energy costs from a shift to more efficient and renewable energy sources (42% very convincing) are the most convincing to Hispanic/Latino voters.

Potential negative impacts of not addressing climate change are also very convincing to Hispanic/Latino voters, including messages focused on the health consequences of climate seen here in the U.S. (48% very convincing), food supply disruptions (46% very convincing), and how climate change can wreak havoc on our global supply chains leading to higher prices (45% very convincing) are the most convincing reasons among Hispanic/Latino voters to vote for a candidate that supports addressing climate change.

After messaging, the share of Hispanic/Latino voters who say they are more likely to support a candidate for Congress who has “addressing climate change” as one of their top three priorities to address once elected grows by 7 points (from 69% to 76%) – making **over three in four Hispanic/Latino voters are more likely to support a candidate that prioritizes climate change.**

All of which demonstrates that candidates who prioritize addressing climate change and make it a top three platform position, stand to benefit from the overwhelming majority of Hispanic/Latino voters who find climate-focused agendas appealing.

ABOUT THE POLL

Global Strategy Group conducted a nationwide online survey of 1,000 likely general election voters with oversamples of 100 Black, 100 Hispanic/Latino/Latinx, and 100 Asian and Pacific Islander voters between September 29 and October 4, 2022. The margin of error at the 95% confidence level is +/-3.1%. The margin of error on sub-samples is greater.

**IRA description: “As you may or may not know, Congress recently passed the Inflation Reduction Act or the IRA. This legislation will expand domestic production of wind, solar, and fossil fuel energy sources, so the U.S. is less dependent on foreign oil, it will also reduce carbon emissions while funding environmental justice related projects. This plan will be paid for by closing unfair tax loopholes and raising taxes on companies that ship jobs overseas. Based on what you know, would you support or oppose a candidate for Congress who voted YES on the Inflation Reduction Act or the IRA bill?”*
